

gizDuino IOT-644

Is gizDuino IOT-644 perfect for a gizDuino connected to the internet via router/modem with internet connection? I want my gizDuino to be access through online (internet via cloud server) and through offline (via router/modem). Or should I use ethernet shield or a wifi shield instead?

gizDuino IOT-644 board has built-in Ethernet module Wiznet 5500. You just need to connect it the router to get access on to the server or internet.
