Serial Camera (CMOS Serial Port (UART) Camera Module)

Is this Serial Camera compatible in Arduino/gizDuino?

Yes of Course, and you need an SD/MMC Card shield and SD card to saved the image. The shot button is A5 (normally high), if pressed/ connect it to the Ground it will starts to capture image. Wait until the process is completed.

Here's the Sample sketch: https://www.e-gizmo.net/oc/kits%20documents/Serial%20Camera/e_gizmo_serial_camera_demo.zip
